Plastics - the Facts

2021

An analysis of European plastics production, demand and waste data
Plastics – the Facts is an analysis of the data related to the production and demand of plastic materials and provisional plastic waste management data. It provides the latest business information on production and demand, trade, and recovery as well as employment and turnover data in the plastics industry. In short, this report gives an insight into the industry’s contribution to European economic growth.
The data presented in this report was collected by Plastics Europe (the Association of Plastics Manufacturers in Europe) and EPRO (the European Association of Plastics Recycling and Recovery Organisations).

Plastics Europe’s Market Research and Statistics Group (PEMRG) provided input on the production and demand of plastic raw materials. Conversio Market & Strategy GmbH helped assess waste collection and recovery data. Official statistics from European or national authorities and waste management organisations have been used for recovery and trade data, where available. Research or expertise from consultants completed gaps. Figures cannot always be directly compared with those of previous years due to changes in estimates.

Some estimates from previous years have been revised in order to track progress, e.g., for use and recovery of plastics across Europe over the past decade. All figures and graphs in this report show data for EU27 plus Norway, Switzerland and the United Kingdom, which is referred to as Europe for the purposes of abbreviation – other country groups are explicitly listed.
ENABLING
a sustainable future

Today, plastics deliver numerous benefits to society. They help feed the world in a safe and sustainable manner; they contribute to more energy efficient buildings and houses; they allow great fuel savings in all transportation means ensuring the transition to a green mobility, and they can even save our lives.

Undoubtedly, plastics are key materials in innovation and in reducing energy demand while reducing green gas emissions. And as essential materials for society, our sector must ensure that plastics are sustainable and have a positive impact on people and on the planet.

The plastics industry supports the European Union’s Green Deal and climate-neutrality ambitions, and the Paris Climate Agreement – our collective blueprint for accelerating the transformation to a more sustainable Europe. Our commitment as an industry is to relentlessly focus on ensuring plastics continue to enable and deliver benefits valued by society, while minimising their environmental footprint.
The current report is an analysis of plastics EU trade data, virgin plastics production, virgin plastics converters demand and preliminary post-consumer plastic waste management in the EU27+3 in 2020. This report does not show data related to the production and use of recycled plastics.

For a more exhaustive analysis of plastics progress towards circularity in Europe, including more in-depth post-consumer plastic waste management figures; information on the production and uptake of recycled plastics in new products; and the different available technologies to turn plastic waste into new resources, please refer to the report “The Circular Economy of Plastics – A European Overview”. An update of this report will be released early 2022 by Plastics Europe.

Despite the unexpected challenging circumstances, in 2020, the European plastics industry rapidly adapted its capacities to continue delivering safe and sustainable solutions to society.

As a consequence of the COVID crisis, in 2020, the European plastics value-chain, composed by plastics producers, plastics converters, plastics recyclers and machinery manufacturers, experienced a decrease both in its production and demand levels. Nevertheless, this sector was still able to maintain a high level of employment. With close to 1.5 million people working in over 50,000 companies, most of them SMEs distributed all over Europe, the plastics sector is key to the European economic recovery.

Regarding end-of-life management, the industry increased its efforts to accelerate the circularity of plastics and, although the overall European recycling activities faced serious difficulties, especially in the second quarter of 2020, the plastics post-consumer waste recycling rate increased and the quantities sent to energy recovery processes and to landfill decreased.
CONTRIBUTION to European society
CONTRIBUTION to European society
The European plastics industry includes plastics raw materials producers, plastics converters, plastics recyclers and plastics & rubber machinery producers in the EU27+3.

**KEY FIGURES**

**EMPLOYEMENT CLOSE TO 1.5 MILLION**

In 2020, the European plastics industry maintained its level of employment with a brief slowdown compared to 2019.

**COMPANIES CLOSE TO 52,000**

In 2020, the number of companies slightly decreased but still remained over 50,000 – demonstrating the contribution of this sector to the European industrial fabric.

**TURN OVER CLOSE TO EUR 330 BILLION €**

In 2020, the turnover of the European plastic industry showed a slight decrease compared to the previous year, mainly due to the impact of the COVID-19 crisis on the majority of customer industries.

**KEY FIGURES**

* 2020 Plastics Europe estimations – Eurostat official data only available until 2018.
EMPLEYES PER COMPANY
LESS THAN 30
The vast majority of companies in the plastics sector in Europe are SMEs as the average number of employees per company is around 29 people.

INDUSTRIAL VALUE ADDED
8TH MOST IMPORTANT INDUSTRY*
The European plastics industry ranks 8th in Europe in industrial value-added contribution. It stands at a similar level with the electrical equipment and close to the pharmaceutical industry.

RECYCLING
10,2 MT
In 2020, almost 10.2 million tonnes of post-consumer plastic waste were collected and sent to recycling facilities inside and outside Europe.

INVESTMENTS
IN CHEMICAL RECYCLING
In 2021, plastic producers planned significant investments in chemical recycling technologies – ramping up from EUR 2.6 billion in 2025 to EUR 7.2 billion in 2030.

INDUSTRIAL VALUE ADDED
* Measured by value added at factor cost, 2018.

END-OF-LIFE management
Preliminary data
POST-CONSUMER PLASTIC WASTE treatment in 2020 (provisional data)

In 2020, more than 29 million tonnes of plastic post-consumer waste were collected in the EU27+3. Because plastics products have different life span (ranging from 1 to 50 years or more), of post-consumer plastic waste collection figures do not match demand or consumption figures. More than one third was sent to recycling facilities inside and outside the EU27+3 but over 23% was still sent to landfill and more than 40% was sent to energy recovery operations.

OUTLOOKS
PLASTICS INDUSTRY PRODUCTION in EU27

The sharp decline in production for the European plastics industry due to the coronavirus pandemic in the first half of 2020 was followed by an even stronger recovery.
Evolution of the production of PLASTICS IN PRIMARY FORMS

European plastics manufacturers benefited from the high demand for plastics in 2021 due to the global economic upswing. However, many companies had to deal with supply chain disruptions, bottlenecks in precursors, and rising energy prices.

Index 2015 = 100 on a quarterly basis; seasonally and working day adjusted.

**Growth rates**
- 2019: 3.6%
- 2020: -5.2%
- 2021 forecast: +8.5%

Plastics Europe

Plastics Europe is the pan-European association of plastics manufacturers with offices across Europe. For over 100 years, science and innovation has been the DNA that cuts across our industry. With close to 100 members producing over 90% of all polymers across Europe, we are the catalyst for the industry with a responsibility to openly engage with stakeholders and deliver solutions which are safe, circular and sustainable. We are committed to implementing long-lasting positive change.

EPRO

European Association of Plastics Recycling and Recovery Organisations

EPRO is a pan-European partnership of specialist organisations that are able to develop and deliver efficient solutions for the sustainable management of plastic waste, now and for the future. EPRO members are working to optimise national effectiveness through international co-operation: by studying successful approaches, evaluating different solutions and examining obstacles to progress. By working together EPRO members can achieve synergies that will increase efficient plastics recycling and recovery. Currently 19 organisations in 14 European countries, South Africa and Canada are represented in EPRO.
